

AI & Data Analytics

CONSULTING SERVICES

Transform raw data into strategic advantage. We design intelligent, scalable AI and analytics ecosystems that power real decisions.

CORE AI & ANALYTICS CAPABILITIES

End-to-end intelligence from raw data to enterprise decisions

AI/ML

AI & Machine Learning

Custom ML model development, predictive analytics, classification, regression, and NLP pipelines deployed at enterprise scale.

GenAI

Generative AI Solutions

LLM integration, RAG architectures, copilot development, and prompt engineering using GPT-4, Claude, and open-source models.

BI

Business Intelligence

Power BI, Tableau, and SAP Analytics Cloud dashboards with real-time KPI tracking and self-serve analytics for all business units.

DE

Data Engineering

End-to-end data pipelines, lakehouse architecture, ETL/ELT automation, and scalable ingestion using Azure, AWS, and GCP.

DS

Data Strategy & Governance

Data catalogue, lineage, quality frameworks, master data management and compliance-ready governance operating models.

APO

Predictive & Prescriptive

Demand forecasting, supply chain optimization, churn prediction, and scenario planning powered by advanced statistical models.

OCR

Intelligent Automation

Document intelligence, OCR, workflow automation, and RPA integration to eliminate manual effort and reduce errors.

MLO

MLOps & Model Lifecycle

CI/CD for ML models, monitoring, drift detection, model registry, and automated retraining pipelines in production environments.

TECHNOLOGY & PLATFORM STACK

AI / ML	Generative AI	BI & Viz	Data Engineering	Cloud Platforms
<ul style="list-style-type: none"> Python TensorFlow PyTorch Scikit-learn HuggingFace 	<ul style="list-style-type: none"> GPT-4o Claude API LangChain RAG Vector DBs 	<ul style="list-style-type: none"> Power BI Tableau SAP Analytics Cloud Looker 	<ul style="list-style-type: none"> Azure Synapse Databricks Spark dbt Airflow 	<ul style="list-style-type: none"> AWS Azure GCP Snowflake Delta Lake

INDUSTRY APPLICATIONS

Manufacturing	FMCG & Retail	Life Sciences	Public Sector
Predictive maintenance, quality anomaly detection, production yield optimisation and supply chain AI.	Demand forecasting, shelf analytics, customer segmentation, and personalized promotion engines.	Clinical trial analytics, pharmacovigilance signals, regulatory reporting and drug efficacy modelling.	Resource allocation analytics, citizen service AI, fraud detection, and infrastructure planning dashboards.

OUR AI DELIVERY APPROACH

01 DISCOVER	02 DEFINE	03 DESIGN	04 DEVELOP	05 DEPLOY	06 OPTIMISE
Understand data landscape, business goals & feasibility.	Use-case prioritisation, ROI modelling & data audit.	Architecture, model selection & data pipeline design.	Model training, validation, dashboards & integrations.	Production rollout, API exposure & user enablement.	Monitoring, drift detection & continuous improvement.
